## **Barcode Specifications**

## Background

USCIS has implemented a 2D (two-dimensional) barcode on each page of selected forms that can be used to replace form data entry.

Not every piece of data that the user entered on the form is included in the barcode or appears in the barcode exactly as entered on the form.

- Data entered "by hand" (i.e., handwritten onto the form rather than entered by computer) will not be reflected in the barcode.
- Some data that the user has entered via computer on the form is not captured in the barcode at all.
- Some fields entered on the form by computer are represented in the barcode as combined or altered.

Data is encoded in the barcode in a specific format that allows the data to be parsed (separated) into distinct fields.

- Vertical bars ('|') denote the end of each field in the text string. This includes the last field in the barcode.
- Defined fields that contain no data may be represented by two consecutive bars ('||') or by bars separated by any number of blank spaces ('| |').
- The end of line is not a field separator.
- Data within the barcode relates to data on the same physical page. No barcode contains data from a field entered on a different page.

There are three data fields included in the barcode that are not based on data entered by the applicant. These are the first three data fields in each barcode.

- Form type
- Form revision date
- Form page number
